Frantic Films is looking for a Pipeline Designer

Role Description

The Pipeline Designer takes the lead on assigned Pipeline Cases, working directly with the interested parties to find optimal solutions under the constraints of business. The Designer analyzes the workflow surrounding the case and provides recommendations to the interested parties and works to reach a consensus on the best solution. In cases where pipeline software automation or tools are part of the solution, the Head of Pipeline (aka Pipeline Supervisor) will allocate Developers to the Case. The Designer then provides specifications to - and directs - the Developer(s) to realize the solution.

The Pipeline Designer reports to the Head of Pipeline, but may not be in the same geographical region as the Head of Pipeline. The Pipeline Department is structured such that Designers are allocated to various regions across the globe.

Specific duties and responsibilities include:

1. Investigate business process and workflow issues as assigned by the Head of Pipeline.
2. Analyze existing workflows and processes and propose solutions where needed.
3. Work with interested parties to reach a consensus on newly proposed solutions or processes.
4. Lead small teams of Pipeline Developers to automate business processes.
5. Organize beta testing for solutions involving the creation or revision of software tools.
6. Formally document new workflows, procedures, and tools.
7. Act as a point of contact to the Pipeline Department in your region.
8. Uphold quality standards and vision set forth by the Head of Pipeline.
9. Assist with peer review of solutions proposed by other Designers.
10. Execute other pipeline related tasks as assigned by the Head of Pipeline.
11. Occasional intercontinental travel may be required.

We are looking for someone who:

1. Excellent communication and investigation skills.
2. Responds well to pressure, and works well in a team environment.
3. Self-motivated and able to take charge of complicated situations.
4. Supervisory and time management skills.
5. Exhibits a flexible attitude and can manage his or her time effectively.
6. Has strong organization capabilities and is detail oriented.

7. Can learn quickly in a fast-paced environment.
8. Can prioritize effectively and zero-in on the important tasks.
9. Familiarity with business process or workflow design.
10. Direct experience in the Visual Effects or Post industries.
11. Programming or scripting experience is helpful.

This position is a permanent full time position and remuneration will be commensurate with qualifications and experience.

If you feel your skill set meets the above criteria, please email your resume to:
